New and improved features

- V.21 200baud support
- V.23 FDX support
- DTR handling in leased line
- I/O callback support
- Linemonitoring filter added
- PNP enable/disable functionality
- AT-command line handling improved

Fixes

- Null data and break handling optimized
- V.32/V.32bis convergence problem
- 9 Bit direct mode problem
- Null characters in command mode
- DIP switch problem corrected
- ATZ reset time and handling
- RING signal/message handling
- Callback problem fixed
- Firmware upgrade in autobauding mode
- Display \N1 in AT&V settings
- Resultcodes in V.23

Known issues

- A break signal will not come out on the serial interface until a character is sent out. I.e. after power on a character has to be sent out from the modem before the break signal.
