Remark 1: 3641-0540 Viper-012 is not being replaced and is not subject to LTB

Remark 2: Prices for replacement articles are identical to that of the respective predecessor

Summary

Since full form, fit and function replacement for the previous generation Viper 12 port switches is in place since some time, it is now time to phase out these products, in order for customers to reap the benefits of the new generation in terms of technical qualities and longer ahead life time. Also, phasing out of generation 2 means Westermo will obtain efficiency and cost benefits.

For the above listed products, LTB is Dec 31, 2017 with last shipment June 30, 2018. The products will still be available as spare parts for the foreseeable future.

If anyone has an issue with these dates, please contact me or the Train Team for discussion.

Customized variants will be handled case by case.

I strongly recommend everyone to take the step to the new generation a.s.a.p. If someone needs convincing, here follows a list that summarizes the benefits of the new generation:

- More Gbps ports available
- Fast failover also on Gbps
- More CPU power for routing etc
- More PoE power
- Combined PoE and Gbps ports
- 24 V PoE variants
- 10 ms hold-up also on PoE (Class S2)
- More approvals
- Wider model range, including 20 port variants

Should anyone require more detailed information on the new generation or information on the generation shift in general, feel free to contact me. Product information is of course also available at www.westermo.com.
