Specifikationer

| | |
|-----------------------------|---|
| Överföring | Asynkront, full/halv duplex eller simplex |
| Gränssnitt 1 | EIA RS-232-C/ITU-T V.24/V.28 25-polig D-sub hylsdon, DCE |
| Gränssnitt 2 | 20mA strömslinga, valbar aktiv eller passiv. |
| Överföringshastighet | Upp till 19 200 bit/s |
| Lysdioder | RD, TD, +12 V, -12 V |
| Isolation | Fullständig galvanisk isolation med optokopplare (dataöverföring) |
| Isolationsspänning | 1 500 V |
| Överspänningsskydd | Genombrottsspänning sändare och mottagare 37 V. Avledningsförmåga 0,6 kW under 1 ms. |
| Strömförsörjning | Externt genom PS-02 monterad i ramverk (RV-01). ±20V DC ±20% |
| Säkring | 2 st 100 mA snabb 5x20 mm |
| Effektförbrukning | +20 V 45 mA, -20 V 45 mA |
| Temperaturområde | 5–50°C, omgivningstemperatur |
| Fuktighetsområde | 0–95% RH, utan kondensation |
| Mått | 100x100 mm |
| Vikt | 0,1 kg |
| Montering | I ramverk RV-01, upptar en kortplats. |

Inställningar

MA-29 kan genom en rad inställningsmöjligheter anpassas till ett flertal olika driftförhållanden.

- S1:1-2 Val av mottagare/sändare normal eller inverterad
- S1:3-4 Val av signal för styrning av CTS
- S2-S3 Val av mottagare aktiv/passiv
- S4-S5 Val av sändare aktiv/passiv

OBS! S1:5 och S1:6 används inte.

Invertering Sändare/Mottagare

| | Sändare | Mottagare |
|----|------------|------------|
| SI | Normal | Normal |
| SI | Inverterad | Normal |
| SI | Normal | Inverterad |
| SI | Inverterad | Inverterad |

Mottagare aktiv/passiv

| | 1 | 2 | 3 | |
|----|---|---|---|--------|

Anslutningar

Linjeanslutning

(5-polig skruvplint)

| Riktning | Ansl. nr. | Benämning |
|-----------|-----------|-----------|
| Mottagare | 1 | R+ |
| Mottagare | 2 | R- |
| Sändare | 3 | T+ |
| Sändare | 4 | T- |
| | 5 | Skärm |

Terminalanslutning (DCE)

(RS-232-C/V, 24/V.28, 25-polig D-sub, hylsdon)

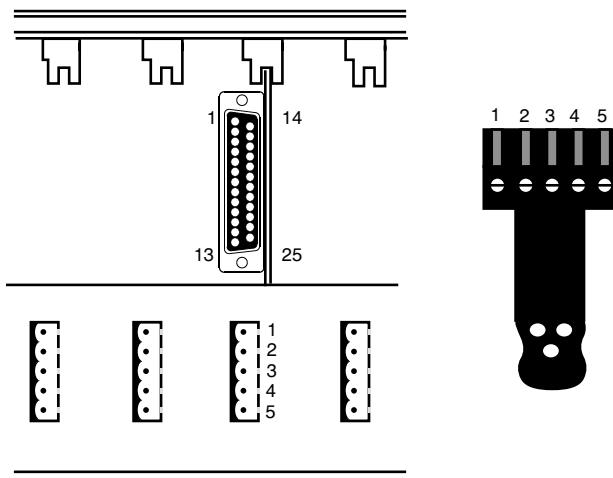

| Riktning | Stift nr. | ITU-T V.24 Benämning | Beskrivning |
|----------|-----------|----------------------|-------------------------|
| I | 2 | I03 | TD/Transmitted Data |
| O | 3 | I04 | RD/Received Data |
| I | 4 | I05 | RTS/Request To Send |
| O | 5 | I06 | CTS/Clear To Send |
| O | 6 | I07 | DSR/Data Set Ready |
| - | 7 | I02 | SG/Signal Ground |
| O | 8 | I09 | DCD/Data Carrier Detect |

I=ingång O=utgång i MA-29

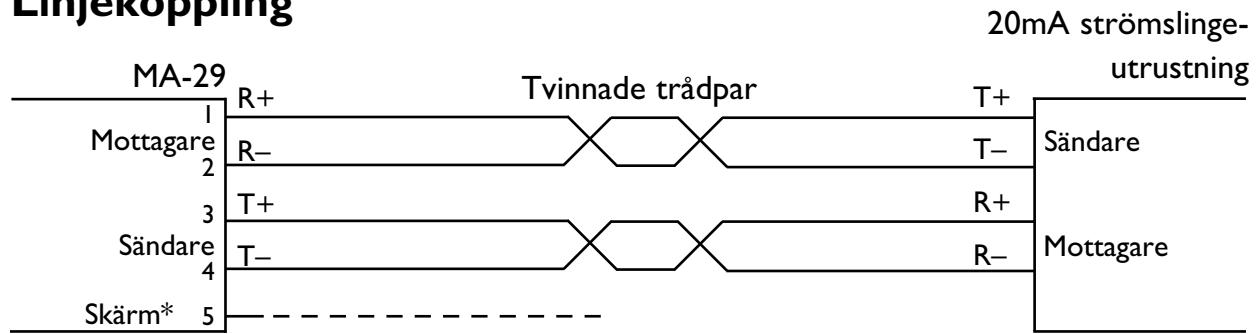

Sektion av RV-01 med en MA-29 sedd bakifrån.

Terminalanslutning sker till en 25-polig D-sub (hylsdon) monterad på MA-29.

Linjeanslutningen sker till en 5-polig frånskiljbar skruvplint. Denna trycks fast i hylsdelen, som är monterad på bakplanskortet i RV-01.

Linjekoppling

* Om skärmad kabel används, anslut skärmen endast i en ände för att undvika jordströmmar.

Överföringsavstånd (gränssnitt 2)

| Kabel 42pF/m 0,3 mm ² | Överföringshastighet bit/s | | | | | |
|--|----------------------------|---------|---------|---------|-------|--------|
| | 600 | 1 200 | 2 400 | 4 800 | 9 600 | 19 200 |
| | 6 000 m | 5 000 m | 4 000 m | 3 000 m | 500 m | 200 m |

Tips

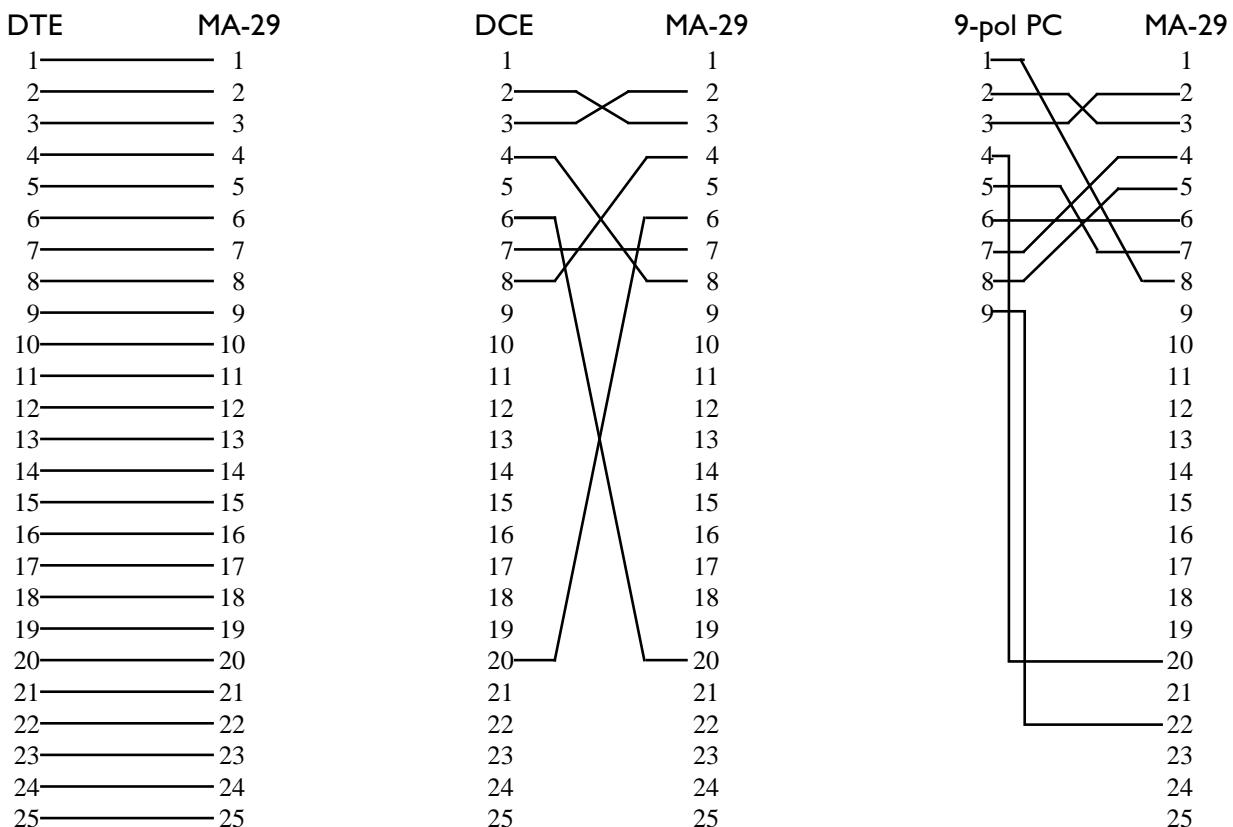

Gränssnittet 20 mA strömslinga, ibland även kallat TTY, bygger på att det finns en strömgenerator som antingen genererar en ström på ett trådpär eller är avslagen. En strömgenerator finns i vardera sändningsriktningen. Därför krävs det att man vet om omvandlaren skall generera (aktiv) eller enbart detektera (passiv) en ström på sändar- respektive mottagartrådparet. Aktiv sändare på MA-29 ger en passiv mottagare på motstående strömslingeutrustning och vice versa.

RS-232 gränssnittet på MA-29 är DCE (Data Communication Equipment), vilket är det vanliga hos kommunikations- utrustning, ex. modem. Andra utrustningar kan vara av typ DTE (Data Terminal Equipment), ex. PC, terminaler och skrivare. Nedan visas förslag till standardkablage.

Om det uppkommer något problem vid inkoppling av MA-29 kan lysdiodsindikeringarna vara till värdefull hjälp vid felsökning.

- RD: Indikerar mottagen data på linjesidan.
- TD: Indikerar mottagen data på RS-232 sidan.
- +12 V, -12 V: Indikerar positiv resp. negativ matningsspänning.

Ett bra sätt att testa omvandlaren är att ansluta den mot en terminal och samtidigt bygla linjen, T+ byglas till R+ och T- till R-. Omvandlaren konfigureras: sändare aktiv och mottagare passiv eller sändare passiv och mottagare aktiv. Det tecken som nu skickas av terminalen skall nu ekas tillbaka.

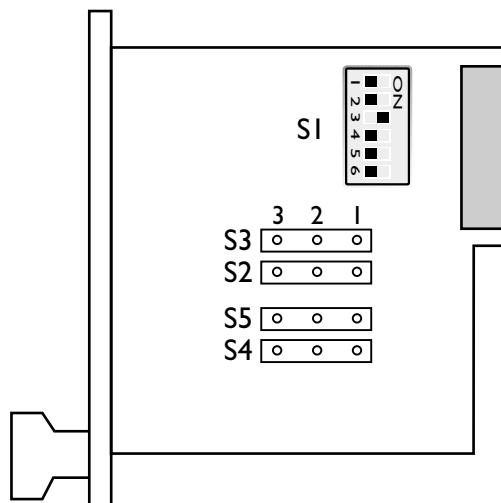

ANTECKNINGAR

Specifications

| | |
|------------------------------|---|
| Transmission | Asynchronous, full/half duplex or simplex |
| Interface 1 | EIA RS-232-C/ITU-T V.24/V.28 25-position D-sub female, DCE |
| Interface 2 | 20 mA current loop, selectable active or passive |
| Data rate | Up to 19 200 bit/s |
| Indicators | RD, TD, +12V, -12V |
| Isolation | Galvanic isolation with opto-coupler (data transmission) |
| Isolation voltage | 1 500 V |
| Oversupply protection | Breakdown voltage transmitter and receiver 37 V Surge capacity 0.6 kW for 1 ms |
| Power supply | External through PS-02 mounted in rack RV-01. ±20V DC ±20% |
| Fuse | 2 pcs 100 mA fast 5x20 mm |
| Power consumption | +20 V 45 mA, -20 V 45 mA |
| Temperature range | 5–50°C, ambient temperature |
| Humidity | 0–95% RH, non-condensing |
| Dimensions | 100x100 mm |
| Weight | 0.1 kg |
| Mounting | To be mounted in rack RV-01, takes one card slot. |

Switch settings

The MA-29 can through different switch settings be adapted to a variety of running conditions.

- | | |
|--------|--|
| S1:1-2 | Selection of transmitter/receiver normal or inverted |
| S1:3-4 | Selection of signal controlling CTS |
| S2-S3 | Selection of receiver active/passive |

Terminal connection (DCE)

(RS-232-C/V.24/V.28, 25-position D-sub, female)

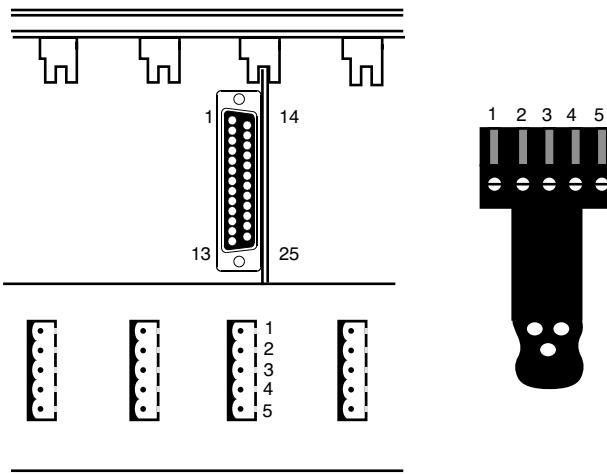

| Direction | Pin no. | ITU-T V.24 Circuit no. | Description |
|-----------|---------|------------------------|-------------------------|
| I | 2 | 103 | TD/Transmitted Data |
| O | 3 | 104 | RD/Received Data |
| I | 4 | 105 | RTS/Request To Send |
| O | 5 | 106 | CTS/Clear To Send |
| O | 6 | 107 | DSR/Data Set Ready |
| - | 7 | 102 | SG/Signal Ground |
| O | 8 | 109 | DCD/Data Carrier Detect |

I=Input O=Output on MA-29

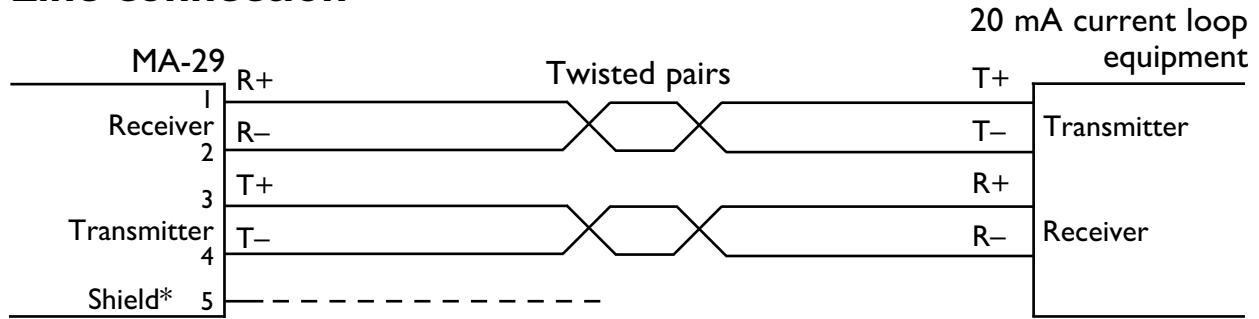

Section of rack RV-01 with one MA-29 mounted.

Terminal connection to a 25-position D-sub (female) connector on MA-29.

Line connection to a 5-position detachable screw-terminal, which is mounted on the male connector located at the rear of RV-01.

Line connection

* If shielded cable is used, connect the shield only at one end to avoid ground currents.

Transmission range (interface 2)

| Cable 42pF/m 0.3 mm ² | Transmission rate bit/s | | | | | |
|--|-------------------------|---------|---------|---------|-------|--------|
| | 600 | 1 200 | 2 400 | 4 800 | 9 600 | 19 200 |
| | 6 000 m | 5 000 m | 4 000 m | 3 000 m | 500 m | 200 m |

Hints

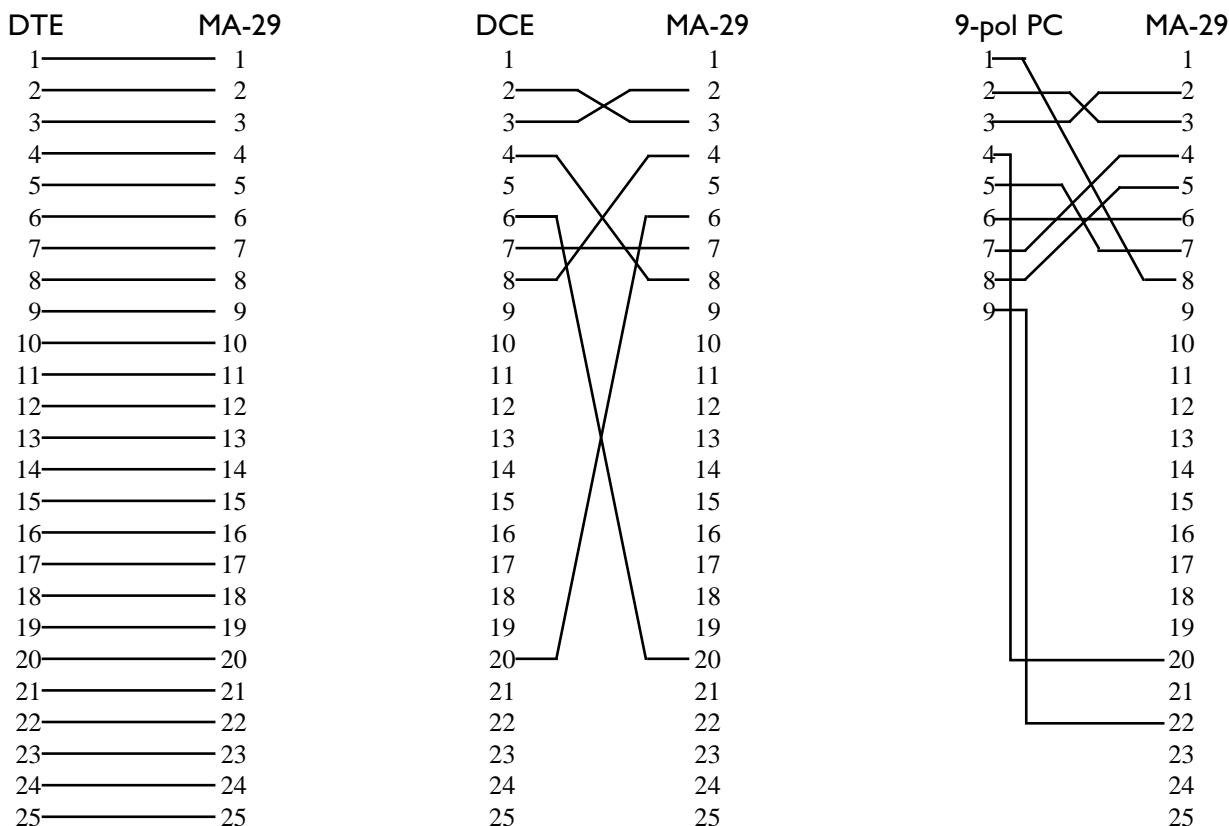

The 20 mA current loop interface, or TTY as it is sometimes known, is a popular industrial communications standard. The system relies on a current generator running on both the transmit and receive circuits. On each circuit it is important to have only one current generator supplying current into that circuit. For this reason the MA-29 can have its current generators set to be either active or passive. It is important to check the state of all attached equipment to ensure correct setting on the MA-29.

The RS-232 interface is configured as DCE (Data Communication Equipment). Most printers, PC's and terminals are set as DTE (Data Terminal Equipment). Some recommendation of cable configurations are given below.

If any problems do occur on set up of the MA-29, the LED's will be helpful.

- RD: Data received on line interface.
- TD: Data received on RS-232 interface.
- +12V, -12V: Positive and negative power supply respectively.

A good way to check the MA-29 is to carry out a loop back test. Ensure that either the transmitter or receiver are set to active, but not both active or passive. Connect T+ to R+ and T- to R-. Connect the RS-232 port to a terminal. When keys are pressed on the terminal you should receive the echo on screen. The TD & RD lights will both flicker simultaneously as you press the keys.

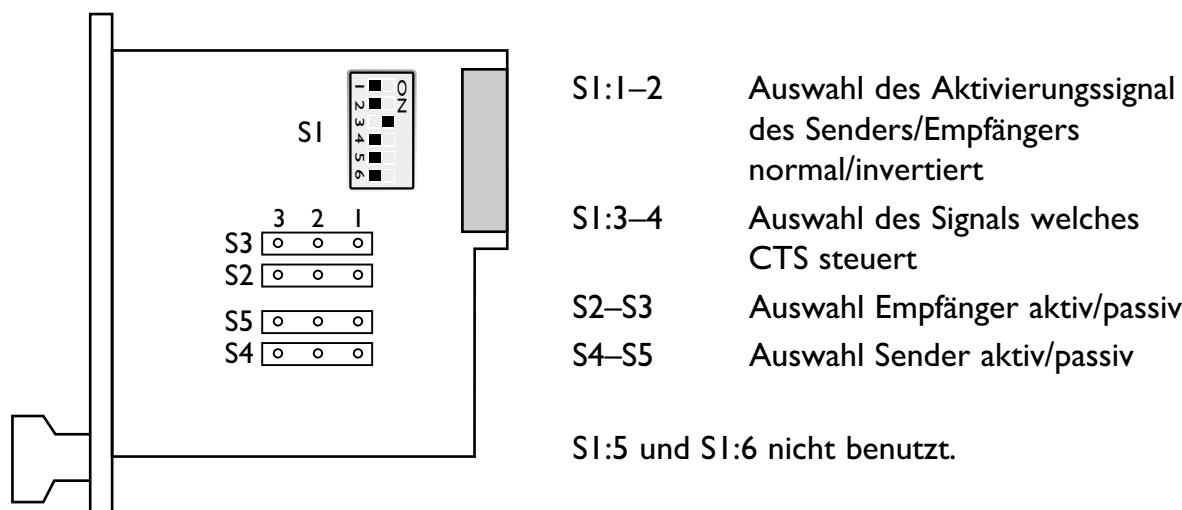

OWN COMMENTS

Technische Daten

| | |
|----------------------------|--|
| Übertragungsarten | Asynchron, Voll-/Halbduplex oder Simplex |
| Schnittstelle 1 | EIA RS-232-C/ITU-T V.24/V.28 25polige Sub-D-Buchse, DÜE |
| Schnittstelle 2 | 20 mA Symmetrische Stromschleife aktiv oder passiv schaltbar |
| Übertragungsraten | bis zu 19 200 Bit/s |
| Leuchtdioden | RD, TD, +12V, -12V |
| Isolation | Galvanisch Isoliert mittels Optokoppler (Datenübertragung) |
| Isolationsspannung | 1 500 V |
| Überspannungsschutz | Durchbruchspannung Sender 15 V und Empfänger 5,8 V Stromstoßkapazität 0,6 KW / 1 mS |
| Spannungsversorgung | Extern über im Rack montiertes PS-02 ±20 VDC ±20% |
| Sicherung | 2x100 mA flink, 5x20 mm |
| Leistungsaufnahme | +20 V 45 mA, -20 V 45 mA |
| Umgebungstemperatur | 5–50°C |
| Luftfeuchtigkeit | 0–95%, nicht kondensierend |
| Abmessungen | 100x100 mm |
| Gewicht | 0,1 Kg |
| Installation | Im Rack, benötigt einen Steckplatz im RV-01 |

DIP-Schalter Einstellung

Das MA-29 bietet verschiedene Einstellmöglichkeiten zur Abstimmung auf verschiedenste Betriebsverhältnisse.

Tips

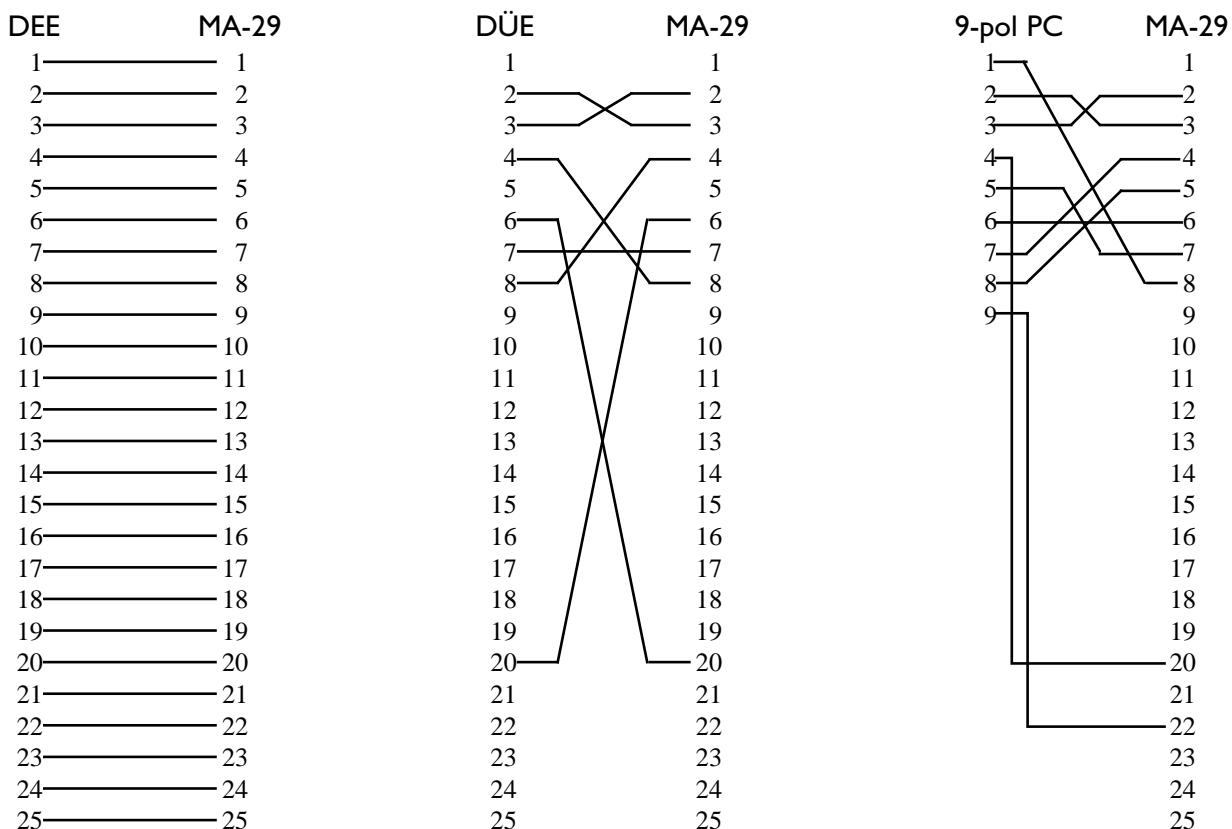

Die 20mA Stromschleifen Schnittstelle, auch TTY genannt, ist ein weitverbreitete industrieller Standard. Das System bezieht sich auf einen Generator der auf der Sender- und Empfängerseite arbeitet. Auf jeder Seite ist es wichtig, daß nur einer in Betrieb ist und Strom in das System einspeist. Aus diesem Grund können die Generatoren beim MA-29 aktiv oder passiv geschaltet werden. Somit sollten alle Geräte überprüft werden ob sie aktiv oder passiv sind.

Die RS-232 Schnittstelle ist als DÜE (Datenübertragungseinrichtung) konfiguriert. Die meisten Drucker, PC's und Terminals sind DEE's (Datenendeinrichtungen). Einige Kabelbelegungen sind unten aufgeführt.

Bei Problemen mit der Einstellung des MA-29 können die LED's hilfreich sein

- RD Daten Empfang an der Leitungsschnittstelle
- TD Daten Empfang an der RS-232 Schnittstelle
- +12V, -12V Positive und negative Spannungsversorgung

Eine gute Testmöglichkeit ist einen Loop-Back Test durchzuführen. Verbinden sie T+ mit R+ und T- mit R-. Verbinden sie den RS 232 Anschluß mit einem Terminal somit sollten die abgeschickten Daten am Terminal sichtbar werden. Wenn eine Taste am Terminal gedrückt wird, müssen die TD und RD LED's abwechselnd flackern.

EIGENE KOMMENTARE

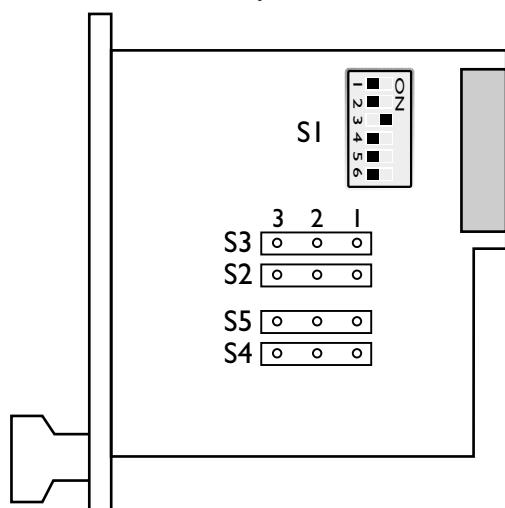

Spécifications

| | |
|----------------------------|---|
| Transmission | Asynchrone, full/half duplex ou simplex |

Configuration des Micro-interrupteurs

Le MA-29 peut s'adapter à divers environnements en fonction de la configuration des micro-interrupteurs.

Ces micro-interrupteurs sont situés sur la carte et possèdent les fonctions suivantes :

- S1:1-2 Configuration de l'émetteur/récepteur, normal ou inversé
- S1:3-4 Configuration du signal pilotant CTS
- S2-S3 Configuration du récepteur actif/passif
- S4-S5 Configuration de l'émetteur actif/passif

n.b. S1 :5 et S1 :6 sont inactifs.

Connexion Terminal (DCE)

(RS-232-C/V.24, Sub-D 25 points, femelle)

| Direction | Broche N° | ITU-T V.24 Code N° | Description |
|-----------|-----------|--------------------|---------------------------|
| I | 2 | 103 | TD / Donnée transmise |
| O | 3 | 104 | RD / Donnée reçue |
| I | 4 | 105 | RTS / Request To Send |
| O | 5 | 106 | CTS / Clear To Send |
| O | 6 | 107 | DSR / Data Set Ready |
| - | 7 | 102 | SG / Masse |
| O | 8 | 109 | DCD / Data Carrier Detect |

I = Input (Entrée) O = Output (Sortie) du MA-29

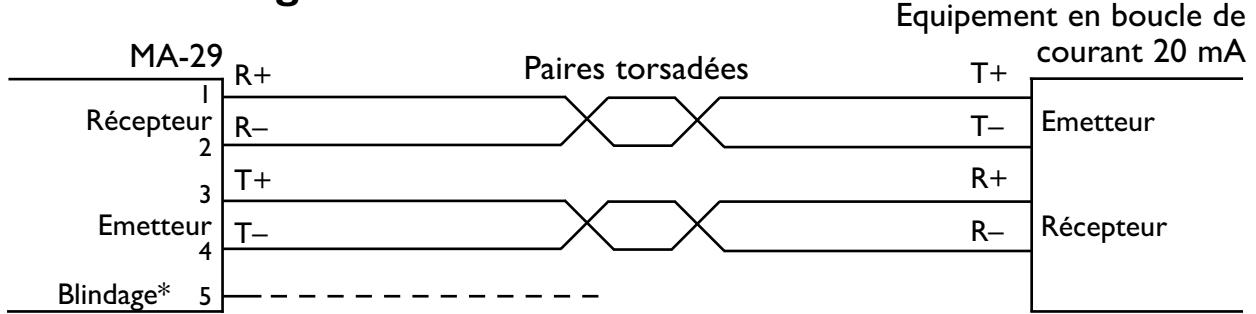

Coupe du rack RV-01 avec un MA-29 installé.

Connecteur Sub-D 25 points femelle du MA-29.

Connexion ligne depuis un bornier à vis détachable 5 points qui est enfiché sur le connecteur mâle situé à l'arrière du rack RV-01.

Connexion ligne

* Si on utilise un câble blindé, connecter le blindage uniquement à une extrémité afin d'éviter les retours de courant de terre.

Vitesse de transmission (interface 2)

| Câble 42 pF/m 0,3 mm ² | Vitesse de Transmission bit/s | | | | | |
|---|-------------------------------|---------|---------|---------|-------|--------|
| | 600 | 1 200 | 2 400 | 4 800 | 9 600 | 19 200 |
| | 6 000 m | 5 000 m | 4 000 m | 3 000 m | 500 m | 200 m |

Conseils pratiques

L'interface boucle de courant 20 mA ou TTY, comme il est quelquefois mentionné, est un standard très répandu de la communication industrielle. Les équipements sont connectés par un générateur de courant fonctionnant à la fois sur le circuit émission et réception. Il est important d'avoir un seul générateur fournissant du courant pour chaque circuit. C'est pour cela que le MA-29 peut avoir chaque générateur configurable en actif ou passif. Il est important de vérifier la situation de tous les équipements connectés afin de s'assurer de la configuration correcte du MA-29. Le MA-29 possède les mêmes interfaces ligne que les MD-21 et MA-21 et sont de ce fait compatibles.

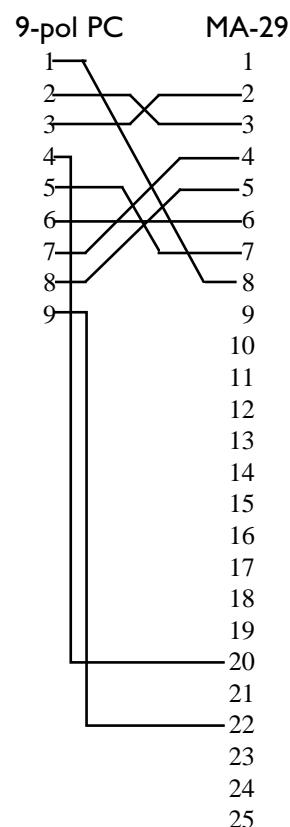

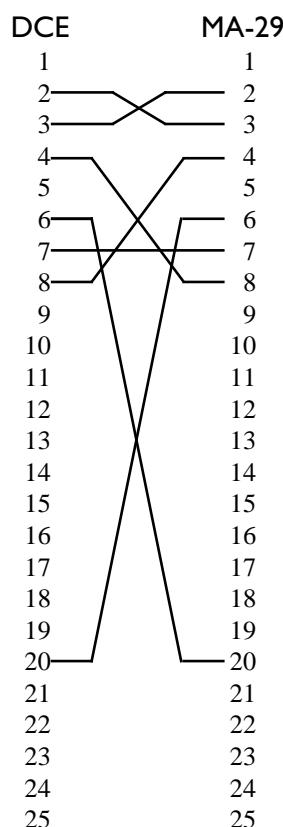

L'interface RS-232 est configurée en DCE (Data Communication Equipment). La plupart des imprimantes, PC et terminaux sont configurés en DTE (Data terminal Equipment). Plusieurs recommandations pour la réalisation du câble sont fournies ci-dessous.

Si certains problèmes surviennent durant la configuration du MA-29, l'état des indicateurs LED sera utile.

- RD: Des données sont reçues sur l'interface ligne.
- TD: Des données sont reçues sur l'interface RS-232.
- +12V, -12V: Respectivement tension d'alimentation positive et négative.

Une bonne solution pour vérifier le fonctionnement du MA-29 est d'effectuer un test de re bouclage. S'assurer que seul l'émetteur ou le récepteur sont configurés en actif, mais pas actif ou passif ensemble. Connecter T+ à R+ et T- à R-. Connecter le port RS-232 à un terminal. Lorsque vous appuyez sur les touches clavier du terminal, vous devez recevoir les caractères correspondants sur l'écran. Les indicateurs LED TD et RD doivent clignoter simultanément tant que vous appuyez sur les touches.

| DTE | MA-29 |
|-----|-------|
| 1 | 1 |
| 2 | 2 |
| 3 | 3 |
| 4 | 4 |
| 5 | 5 |
| 6 | 6 |
| 7 | 7 |
| 8 | 8 |
