

Commissioning Service

A Westermo professional service

- **Service created for commissioning of mission critical systems and networks**
 - May reduce risk of delays and cost increases during commissioning
 - Access to the right skills and technical know-how when you need it
- **Support from personnel with knowledge about your requirements, needs and configurations**
 - Testing and validation
 - Troubleshooting
 - Support on-site when needed

The final commissioning of a project can often require additional resources and competences. Westermo engineers are experienced with a deep knowledge of not only Westermo equipment, but also often the connected equipment and applications as well as your specific needs, requirements and intents with the solution. Additionally, our personnel are always backed up by a global network of experts within the Westermo organization. With this offer you gain access to Westermo data communication experts and benefit from real-time interaction and fast reaction to changing needs.

To ensure that the service is carried out in a safe and professional manner a Risk Assessment and Method Statement is done together with the customer and signed prior to the visit. The scope of works is documented and may entail Product Configuration, Verification of Functionality, Final Acceptance Test (FAT) and Site Acceptance Test (SAT) support depending on the commissioning details.

Requirements

A Method Statement for site visit, including the agreed scope of work. All equipment must be installed prior to commencement of work, e.g. antennas, cables etc.

Deliverables

See the scope of work document for specific deliverables.
