

Network Optimisation Service

A Westermo professional service

- **Service intended to enhance an existing network**
 - Health check of existing implementation
 - Takes evolving needs into consideration
- **Continuous measurements and evaluation available**
 - Proactive improvement proposals
 - More than just a one-time measurement
- **Can be used to enhance / ensure compliance**
 - Redundancy
 - Security
 - Legislation

During the lifecycle of a network the requirements may evolve, indicating a need for optimising the network to the new requirements. This may involve requirements to fulfill redundancy, security or legislative concerns. Network optimisation also considers a poorly designed and/or configured network.

With this offer you gain access to Westermo engineers optimising the network with regards to security, reliability, resilience and performance. Benefit from a personal contact minimizing revenue loss and maximizing network uptime. Westermo engineers are experienced with a deep knowledge of not only Westermo equipment, but also often the connected equipment and applications. Additionally, our personnel are always backed up by a global network of experts within the Westermo organization. Westermo engineers can perform network optimization based on the information provided and produce a new network design optimised for the customer's needs.

To ensure that the service is carried out in a safe and professional manner a Risk Assessment and Method Statement, including scope of work, is done together with the customer and signed prior to the visit.

Requirements

A Method Statement for site visit, including the agreed scope of work. Necessary documentation such as current topology and description of operation. Reasons for network optimisation shall be included in form of problem descriptions, new requirements etc.

Deliverables

See the scope of work document for specific deliverables, below are examples.

- Summary and conclusion of current network status
- Optimisation report with design recommendations
