Maximizing network uptime and minimizing network security risks can often drive resource and competence needs, this is where Westermo Engineers can be a valuable addition to your network security.

Benefit from a personal contact extending your resources and adding to your competence. Westermo can assist in understanding and managing network security risks. The threat of a sophisticated cyber-attack on mission critical infrastructure networks is increasing all the time. An attack on these networks could have a profound impact, causing great economic loss or worse.

Westermo recognizes that to effectively defend against potential attacks, it is necessary to deliver more than just a product. Westermo engineers can support understanding and manage the network security risk using the Westermo Operating System (WeOS). Using WeOS, Westermo engineers can harden your network with regards to:

- Network segregation
- Network to network protection
- Perimeter protection
- Network hardening

To ensure that the service is carried out in a safe and professional manner a Risk Assessment and Method Statement, including scope of work, is done together with the customer and signed prior to the visit.

Requirements

A Method Statement for site visit, including the agreed scope of work.

Deliverables

See the scope of work document for specific deliverables, below are examples.

- Vulnerability report with remedial action plan for Network Segregation
- Network to Network Protection
- Perimeter Protection
- Network Hardening
